

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) A control system comprising:

a ~~first~~-control apparatus comprising, at least, a display screen which can also be used as a touch panel, said ~~first~~-control apparatus operating a predetermined electronic apparatus;

a ~~second~~-first server for communicating with said ~~first~~-control apparatus, said ~~second~~-first server being connected or linked to a plurality of electronic apparatuses;

a ~~third~~-second server for establishing a connection with said ~~second~~-first server by a network;

wherein said ~~first~~-control apparatus changes settings of at least one of GUI data, internal processing data, and display data, which are contained in said ~~first~~-control apparatus, based on at least one of GUI data, internal processing data, and display data, which are stored or designated by said ~~second~~-first server.

2. (Currently Amended) A control system according to claim 1, wherein said ~~first~~-control apparatus comprises a remote control.

3. (Original) A control system according to claim 1, wherein the network comprises the Internet.

4. (Original) A control system according to claim 1, wherein the electronic apparatuses comprise home appliances and audio-visual apparatuses.

5. (Currently Amended) A control system according to claim 1, wherein the display screen of said ~~first~~ control apparatus comprises a liquid crystal display screen.

6. (Currently Amended) A control system according to claim 1, wherein said ~~second~~ first server receives information recorded by said ~~third~~ second server through the network; and said ~~second~~ first server transfers the received information to said ~~first~~ control apparatus using wired or wireless communications.

7. (Currently Amended) A control system according to claim 1, wherein communication data communicated among said ~~first~~ control apparatus, said ~~second~~ first server, and said ~~third~~ second server comprise meta-data.

8. (Currently Amended) A control system according to claim 1, wherein said ~~second~~ first server includes control data for the electronic apparatuses; and said ~~first~~ control apparatus receives the control data for a specific electronic apparatus from said ~~second~~ first server and uses the data as the internal processing data.

9. (Currently Amended) A control system according to claim 8, wherein said ~~second~~ first server downloads the control data from said ~~third~~ second server.

10. (Currently Amended) A control system according to claim 1, wherein said ~~first~~-control apparatus further comprises display means for combining the control data for the electronic apparatuses and displaying the combined data.

11. (Currently Amended) A control system according to claim 1, wherein said ~~first~~-control apparatus downloads data received from said ~~second~~-first server to the electronic apparatuses which are connected or linked to said ~~second~~-first server.

12. (Currently Amended) A control system according to claim 11, wherein the data includes data downloaded from said ~~third~~-second server.

13. (Original) A control system according to claim 12, wherein the data includes an electronic program guide.

14. (Currently Amended) A control system according to claim 1, wherein said ~~second~~-first server and the electronic apparatuses are connected by link connection with a digital interface which conforms to the IEEE 1394 specification standard.

15. (Currently Amended) A control system comprising:

a ~~first~~-control apparatus comprising, at least, a display screen which can also be used as a touch panel, said first control apparatus operating a predetermined electronic apparatus; and

a ~~second~~-server for communicating with said ~~first~~-control apparatus, said ~~second~~-server being connected or linked to a plurality of electronic apparatuses;

wherein said ~~first~~-control apparatus changes settings of at least one of GUI data, internal processing data, and display data, which are contained in said ~~first~~-control apparatus, based on at least one of GUI data, internal processing data, and display data, which are stored or designated by said ~~second~~-server.

16. (Currently Amended) A control system according to claim 15, wherein said ~~first~~-control apparatus comprises a remote control.

17. (Original) A control system according to claim 15, wherein the electronic apparatuses comprise home appliances and audio-visual apparatuses.

18. (Currently Amended) A control system according to claim 15, wherein the display screen of said ~~first~~-control apparatus comprises a liquid crystal display screen.

19. (Currently Amended) A control system according to claim 15, wherein said ~~first~~-control apparatus transfers the information contained therein to said ~~second~~-server using wired or wireless communications.

20. (Currently Amended) A control system according to claim 15, wherein communication data communicated between said ~~first~~-control apparatus and said ~~second~~-server comprise meta-data.

21. (Currently Amended) A control system according to claim 15, wherein said ~~second~~-server includes control data for the electronic apparatuses; and said ~~first~~-control apparatus receives the

control data for a specific electronic apparatus from said ~~second~~ server and uses the data as the internal processing data.

22. (Currently Amended) A control system according to claim 15, wherein said ~~first~~-control apparatus further comprises display means for combining the control data for the electronic apparatuses and displaying the combined data.

23. (Currently Amended) A control system according to claim 15, wherein said ~~first~~-control apparatus downloads data received from said ~~second~~-server to the electronic apparatuses which are connected or linked to said ~~second~~-server.

24. (Original) A control ~~data~~-system according to claim 23, wherein the control data includes an electronic program guide.

25. (Currently Amended) A control system according to claim 15, wherein said ~~second~~-server and the electronic apparatuses are connected by link connection with a digital interface which conforms to the IEEE 1394 specification standard.
